For question number 10 to 11 two statements are given one labeled Assertion and other labeled Reason select the correct answer to these questions from the codes (a), (b), (c) and (d) as given below

- a) Both assertion (A) and reason (R) are true and reason (R) is the correct explanation of assertion (A).
 b) Both assertion (A) and reason (R) are true but reason (R) is not the correct explanation of assertion (A).
 c) Assertion (A) is true but reason (R) is false.
 d) Assertion (A) is false but reason (R) is true.

Q.10 : **Assertion (A):** If ΔABC and ΔPQR are congruent triangles, then they are also similar triangles.

Reason (R): All congruent triangles are similar but the similar triangles need not be congruent.

Q.11 : **Assertion (A):** In the given figures, $\Delta ABC \sim \Delta GHI$.

Reason (R): If the corresponding sides of two triangles are proportional, then they are similar.

Section : B (Each 2 Marks)

Q.12 : In fig.,

AD is the bisector of $\angle A$;

If $BD = 4\text{ cm}$, $DC = 3\text{ cm}$ and

$AB = 6\text{ cm}$ determine AC.

OR

In the figure ABC and DBC are two right triangles.

Prove that $AP \times PC = BP \times PD$.

Q.13 : In Fig. $AB \parallel PQ \parallel CD$, $AB = x$ units, $CD = y$ units and $PQ = z$ units. Prove that $\frac{1}{x} + \frac{1}{y} = \frac{1}{z}$.

Section : C (Each 3 Marks)

Q.14 : If the diagonals of a quadrilateral divide each other proportionally, prove that it is a trapezium.

OR

In $\triangle ABC$, $AB = AC$ and

D is midpoint of on side AC such that

$BC^2 = AC \times CD$, Prove that $BD = BC$.

Q.15 : In Fig, if $\triangle ABC \sim \triangle DEF$ and their sides are of lengths (in cm) as marked along with them, then find the lengths of the sides of each triangle.

Section - D(Each 5 Marks)

Q.16 : Through the mid point M of the side CD of a parrallelogram ABCD, the line BM is drawn intersecting AC in L and AD produced in E prove that $EL = 2BL$.

OR

Prove that, if a line is drawn parallel to one side of a triangle to intersect the other two sides in distinct points, the other two sides are divided in the same ratio.

Using the above result, do the following:

In Fig. $DE \parallel BC$ and $BD = CE$. Prove that “ABC is an isosceles triangle.

Section : E

Q.17 : Case study :

Shweta went to a beach with her uncle. From a point A where Shweta was standing, a ship and lighthouse come in a straight line as shown in the figure.

- i) Which similarity criteria can be seen in this case, if ship and lighthouse are considered as straight lines? 1
- ii) The distance between Shweta and the ship is twice as much as the height of the ship. 1
What is the height of the ship?
- iii) If the distance of Shweta from the lighthouse is twelve times the height of the ship, 2
then find the ratio of the heights of ship and lighthouse.

OR
