

SHIKSHA CLASSES

Subject : Geometry

Answer Paper

Total Marks : 20

Class : X

4. Geometric Construction

Q.1 A) Choose the correct alternative from objectives given below. 2

Ans: 1) The maximum number of tangents that can be drawn to a circle from a point outside it is 2.

2) What is the point of concurrence of the altitudes of a triangle known as?

Ans: Orthocenter

B) Attempt Any ONE of the following. 1

Construct a tangent to a circle with centre P and radius 3.2 cm at any point M on it.

Ans.: Solution :

Q 2 : A) Attempt Any ONE of the following. 2

1) Draw a circle with center 'O' and radius 3.5 cm. Take a point P at a distance 5.7 cm from the center. Draw tangents to circle from point P.

2) Draw a circle of radius 3.6cm. Draw a tangent to the circle at any point on it without using centre.

Ans. :

B) Attempt Any ONE of the following. 2

1) Draw seg PQ = 7cm. Divide it in the ratio 3:2.

Ans:

4) $\Delta ABC \sim \Delta PQR$, in ΔABC , $AB = 5.4$ cm, $BC = 4.2$ cm, $AC = 6.0$ cm. $AB : PQ = 3 : 2$. Construct ΔABC and ΔPQR .

Ans.:

Rough Figures

Construct $\triangle ABC$ of given measure

$\triangle ABC$ and $\triangle PQR$ are similar

\therefore Their corresponding sides are proportional

$$\frac{AB}{PQ} = \frac{BC}{QR} = \frac{AC}{PR} = \frac{3}{2} \dots\dots (1)$$

As sides AB, BC, AC are known, we can find the lengths at sides PQ, QR, PR .

Using eqⁿ. (1)

$$\frac{5.4}{PQ} = \frac{4.2}{QR} = \frac{6.0}{PR} = \frac{3}{2}$$

$\therefore PQ = 3.6 \text{ cm}, QR = 2.8 \text{ cm} \ \& \ PR = 4.0 \text{ cm}$

Q.3: A) Attempt Any ONE of the following. 3

1) Draw a circle with radius 4.1 cm. Construct tangents to the circle from a point at a distance of 7.3 cm from the centre.

Ans. :

2) Draw a circle with centre O and radius 3cm. Take a point P at a distance of 7cm from the centre. Draw tangents to the circle from point P.

Ans. :

B) Attempt Any ONE of the following. 3

1) Draw a circle of radius 3.5 cm. Take a point R at a distance of 7cm from the centre. Draw tangents to the circle from point R.

Ans. :

2) Construct any $\triangle ABC$ construct $\triangle A'B'C'$ such that $AB : A'B' = 5 : 3$ and $\triangle ABC \sim \triangle A'BC'$

Ans.:

Q. 4 : Attempt Any ONE of the following. 4

1) $\Delta PQR : \Delta LTR$. In ΔPQR , $PQ = 4.2\text{cm}$
 $QR = 5.4\text{cm}$ $PR = 4.8\text{cm}$. Construct

ΔPQR and ΔLTR , Such that $\frac{PQ}{LT} = \frac{3}{4}$.

Ans: $\Delta PQR \sim \Delta LTR$, $\frac{PQ}{LT} = \frac{QR}{TR} = \frac{PR}{LR}$

[Corresponding sides are in proportion]

$$\therefore \frac{4.2}{LT} = \frac{5.4}{TR} = \frac{4.8}{LR} = \frac{3}{4} \left[\frac{PQ}{LT} = \frac{3}{4} \right]$$

$$LT = \frac{4.2 \times 4}{3} = 1.4 \times 4 = 5.6\text{cm},$$

$$TR = 7.2\text{cm}, LR = 6.4\text{cm}$$

2) $\Delta ABC : \Delta APQ$ In ΔABC , $AB = 6.0\text{cm}$,

$\angle BAC = 110^\circ$, $CA = 5.5\text{cm}$. $\frac{BA}{PA} = \frac{5}{3}$

construct ΔAPQ .

Q. 5 : Attempt Any ONE of the following. 3

1) Draw ΔABC with side $BC = 6\text{cm}$,

$\angle B = 45^\circ$, $\angle A = 100^\circ$. construct a

triangle whose sides are $\frac{4}{7}$ times the

corresponding sides of ΔABC .

Ans: In ΔABC , $\angle A + \angle B + \angle C = 180$

$$100 + 45 + \angle C = 180$$

$$\angle C = 180 - 145 = 35^\circ$$

ΔPBQ is a required triangle

2) $\triangle AMT : \triangle AHE$.

In $\triangle AMT$, $AM = 6.3\text{cm}$,

$\angle TAM = 50^\circ$, $AT = 5.6\text{cm}$

$\frac{AM}{AH} = \frac{7}{5}$ construct $\triangle AHE$.

Ans. :
